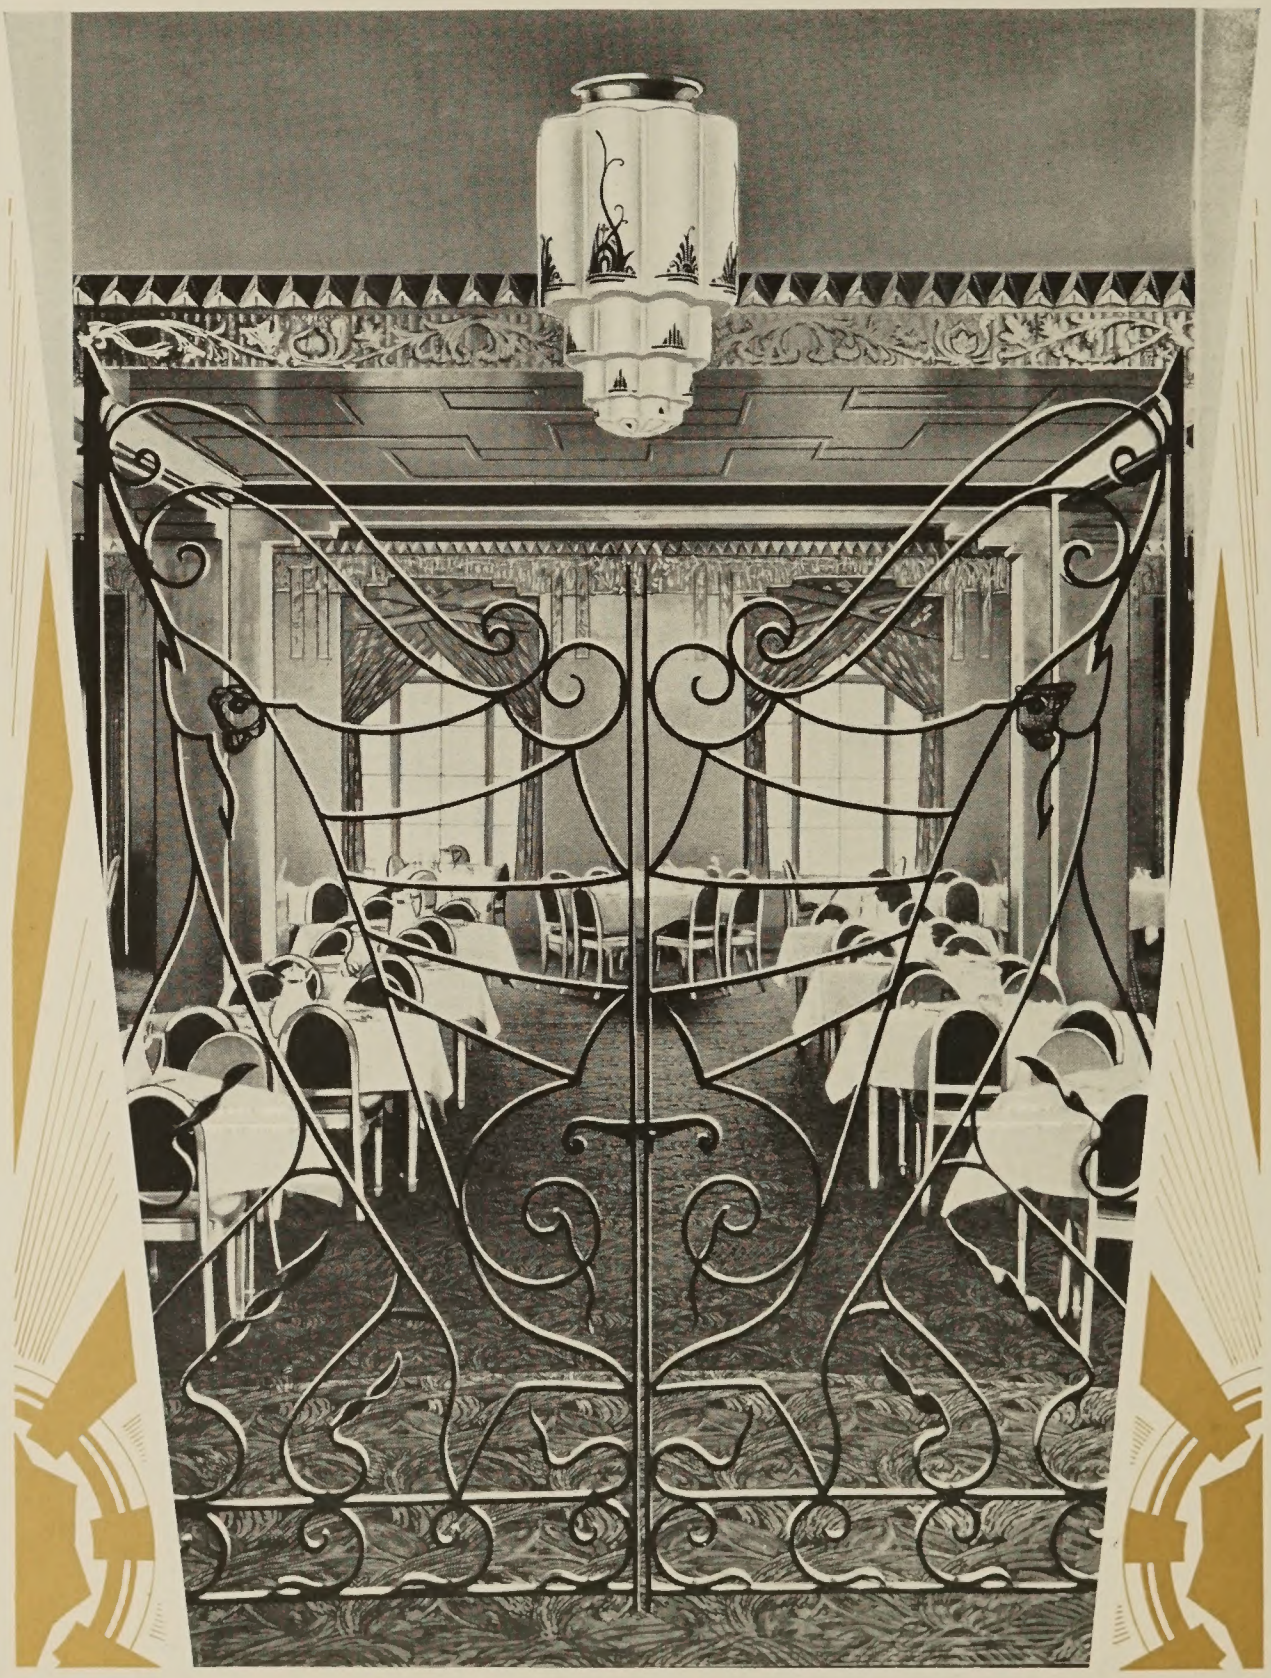
NEW YORK CHICAGO BOSTON



THE Modern Lighting Glassware presented in this catalog consists of designs and treatments that are already proven successes and represent developments beyond the experimental stage.

In order to follow the fundamental principles of modernism, we have suppressed and discarded any developments of a freakish aspect and designed pieces that have intrinsic beauty coupled with serviceability.

Included in this offering, you will find glass shapes that are distinctly beautiful and that possess individuality. There are also glass textures and decorations that are new, and by virtue of their quality, typically Phoenix.

In addition to our regular shapes and designs, we maintain a creative department to serve manufacturers of lighting equipment. We are pleased to offer the facilities of our factory and the services of our designers in developing and producing shapes and decorative treatments.

DESCRIPTION OF FINISHES

FROSTELL ETCHING

Frostell is an unusual surface texture on crystal etched glass. Its beauty lies in the irregularity of the broken surfaces producing an effect similar to a heavy incrustation of frost.

PLAIN FROSTELL

The crystal effect is softened with an iridescent lustre finish.

FROSTELL ANTIQUE

A sepia toning coupled with an iridescent finish produces a soft antique effect.

VERRE COULÉ

E 213 SILVER

Crystal glass satin finished showing the raised design with high lighting effect similar to the Lalique treatment.

D 198 GOLD

Crystal glass permanently toned with a soft golden glow effect.

ALABASTER GLASS

Alabaster (cased) glass can be furnished plain or with a satin finish.

AUREOLA D 398

Alabaster glass with a decorated background. A recent development that is unusual and very beautiful.
